

Living Legacy

Sustainable forest management at Hinton, Alberta

Living Legacy

Sustainable forest development at Hinton, Alberta

About this publication

This publication grew out of discussions surrounding the 40th anniversary of pulp production at Hinton, which was officially celebrated in September 1997. Many of those involved in the anniversary were asking, 'What achievements and lessons stand out in the first four decades of this unique experiment in sustainable forest development?' The answers are summarized on these pages.

Much of the historical information in this report was compiled by Peter Murphy, professor emeritus of forestry at the University of Alberta, during a larger history and research project on forest management at Hinton. As part of the same project, Bob Stevenson compiled and catalogued many of the photographs. Hazel Hart's *History of Hinton* (1980) provided invaluable information on the early days.

Our thanks to current and former Weldwood employees who provided guidance as the project developed.

Project managers Bob Udell and Bob Stevenson, writing and editing Robert Bott and Peter Murphy, design and production Helix Design Communications Ltd., printing Speedfast Color Press (1983) Ltd.
