# Introduction

The vision of the Northern East Slopes Strategy is:

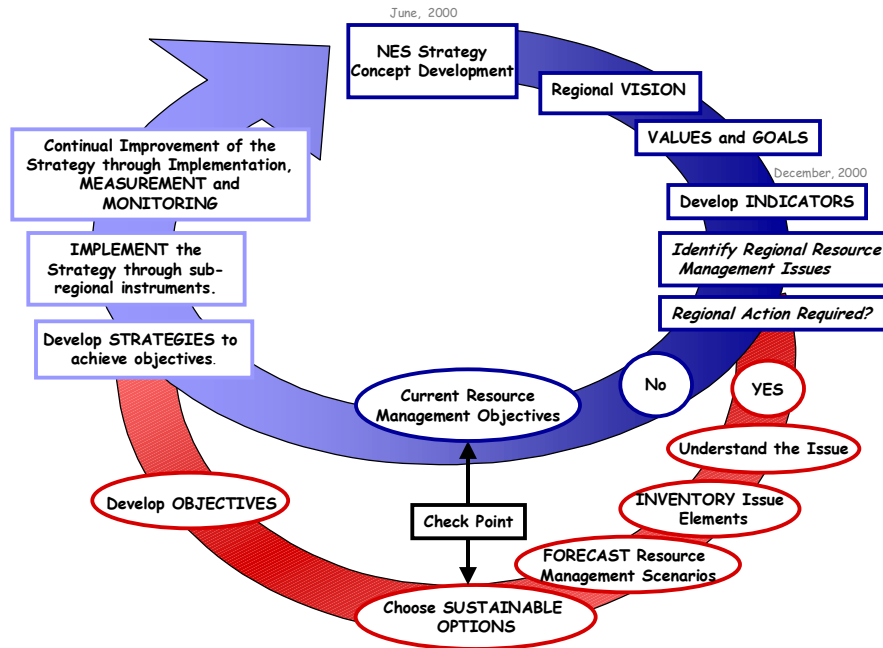

“Integrated management of natural resources in a manner which ensures a healthy and sustainable environment, economy, and community that can be enjoyed by present and future generations”

(Regional Steering Group for the NES Strategy 2001).

This vision will be achieved in the region (Fig. 1) by implementing a planning process (Fig. 2) in which indicators are selected, forecast, and measured, in order to assess progress towards specified goals.

**Figure 1.** Boundary of the Northern East Slopes Strategy<sup>1</sup>.  
<sup>1</sup> Source: Regional Steering Group for the NES Strategy (2001)

**Figure 2.** The NES Strategy Planning Process<sup>1</sup>.

<sup>1</sup> Source: Regional Steering Group for the NES Strategy (2001)

This project is intended to support this planning process by meeting the following objectives:

1. Provide a complete overview of indicators related to sustainable resource and environmental management previously identified within the Northern East Slopes, or relevant to the Northern East Slopes.
2. Identify objectives and goals related to each indicator, and briefly describe how each indicator is reported.
3. Describe how each indicator is related to the values and goals that have been developed for the Northern East Slopes.
4. Assess the potential applicability of each indicator in the context of the planning process developed by the Northern East Slopes Strategy.

A systematic approach to meeting these objectives consisted of four steps:

1. Conduct a comprehensive search for all management documents prepared in the region that include indicators that may relate to the values and goals identified by the Regional Steering Group. Government, non-government, and industry representatives were contacted
2. Construct a database to record and organize the indicators and supplementary information in a way that permits queries and summaries.
3. Link the indicators to each value and goal of the NES Strategy, including a ranking of the indicator's potential applicability.
4. Consolidate all of the above information into an information package for the Regional Steering Group intended to assist in the final selection of indicators.

## Summary of Materials Reviewed

A total of 25 sources were reviewed for potential indicators of sustainable resource and environmental management. The relevance of these sources to the NES Strategy area and planning process varied greatly, and emphasis was placed on sources containing indicators whose levels are, or could be, measured within the NES Strategy area.

**Table 1.** Potential sources of indicators of sustainability within the NES Strategy area. No. refers to number of indicators included in this report.

|    | <b>Source</b>  | <b>Organization</b>  | <b>Date</b> | <b>No.</b> |
|----|--|--|-------------|------------|
| 1  | Indicators of Sustainable Forest Management for the Foothills Model Forest             | Foothills Model Forest   | 1998        | 81         |
| 2  | Defining Sustainable Forest Management: A Canadian Approach to Criteria and Indicators | Canadian Council of Forest Ministers                               | 1995        | 69         |
| 3  | Sustainable Forest Management Stewardship Report (2000)                                | Weldwood of Canada, Hinton Division                                | 2001        | 47         |
| 4  | Detailed Forest Management Plan (Draft)  | Weyerhaeuser Canada (Edson)  | 2001        | 16         |
| 5  | Detailed Forest Management Plan (1997-2006)  | Millar Western Industries  | 2000        | 69         |
| 6  | Forest Stewardship in Canada   | Weyerhaeuser Canada  | 2000        | 24         |
| 7  | Environment, Health and Safety Stewardship Progress Report                             | Canadian Association of Petroleum Producers                        | 2000        | 8          |
| 8  | Range Health Assessment Program  | Public Lands Division, AB Agriculture, Food, and Rural Development | 2000        | 8          |
| 9  | West Central Airshed Society Annual Report   | West Central Airshed Society                                       | 1999        | 6          |
| 10 | Canadian Standards Association Proposal (Draft)  | Weyerhaeuser Canada (Gr Cache / Gr Prairie)                        | 2001        | 14         |

| 19 | Sustainable Development in the United States: An Experimental Set of Indicators | US Interagency Working Group on Sustainable Development Indicators | 1998 | 29 |
| 20 | Sustainability Indicators for the Fraser Basin Workbook                         | Fraser Basin Council   | 2000 | 21 |
| 21 | Obed Mountain Coal (unpubl.)  | Obed Mountain Coal   | 2001 | 4  |
| 22 | Detailed Forest Management Plan: Vol. 1   | Sundance Forest Industries   | 1999 | 0  |
| 23 | Management Strategy for the Little Smoky River Corridor                         | Alberta Newsprint Company  | 1996 | 0  |
| 24 | Sustainable Forest Management: Fish and Wildlife Strategies                     | Blue Ridge Lumber Ltd.   | 1999 | 0  |
| 25 | Whitehorse Wildland Park Management Plan  | Alberta Natural Resources Service, Hinton                          | 2000 | 0  |

A brief description of the sources listed in Table 1 follows:

### **1 Indicators of Sustainable Forest Management for the Foothills Model Forest**

#### **Foothills Model Forest, 1998**

This report contains a preliminary list of approximately 95 indicators corresponding to six general goals and 27 specific goals that support sustainable forest management in the Foothills Model Forest. The indicators are organized according to the six criteria identified by the Canadian Council of Forest Ministers (1995, Table 2). FMF-specific goals were considered to be mandated by legislation, policy or public process. The indicator selection process was facilitated by a workshop, and the preliminary indicator set is currently under review.

### **2 Defining Sustainable Forest Management: A Canadian Approach to Criteria and Indicators**

#### **Canadian Council of Forest Ministers, 1995**

This document contains 83 indicators developed for 6 general criteria and 22 specific criteria

for sustainable forest management in Canada. Some data required for these indicators are available, while other indicators will require new data, new techniques, or further research. The criteria and indicators were designed to be compatible with international efforts such as the Montreal Process (1997).

### **3 Sustainable Forest Management Stewardship Report (2000)**

#### **Weldwood of Canada, Hinton Division, 2001**

This comprehensive report contains 48 indicators for sustainable forest management on Weldwood's Forest Management Agreement (FMA) area organized around the six criteria identified by the Canadian Council of Forest Ministers (Table 2). The report is designed to fulfill reporting requirements for Weldwood's CAN/CSA Z809 certification, ISO 14001 certification and the annual Stewardship report initiated in 1994. All three reports have been combined and renamed the Sustainable Forest Management Stewardship Report. Each indicator is associated with one or more objectives, and accompanying text provides a brief account of what has been completed and planned for the future. The performance status of 119 commitments specified in the 1999 Forest Management Plan will be reported in 2001.

### **4 Detailed Forest Management Plan (Draft)**

#### **Weyerhaeuser, Edson (2001)**

This document is in draft form and thus only portions (chapters 5 and 9) were available for review. Approximately 35 indicators organized around eight general goals and 37 specific goals for sustainable forest management have been proposed for Weyerhaeuser's Edson FMA area. The eight general goals are:

- 1) Ensure facilities remain globally competitive with respect to fiber supply while recognizing other facilities share similar desires
- 2) Maintain forest diversity at the stand and landscape level in terms of structure, composition and function
- 3) Maintain the productive capacity of the forest ecosystem
- 4) Maintain the process and function of watersheds
- 5) Improve public acceptability of forest management activities
- 6) Integrate forest management activities with the needs of other resource users
- 7) Protect unique archeological and ecological sites
- 8) Increase the sustainable harvest level of deciduous and coniferous timber.

### **5 Detailed Forest Management Plan (1997-2006)**

#### **Millar Western Industries, 2000**

This management plan contains 74 potential indicators for sustainable forest management on Millar Western's FMA area. Indicators are organized around the six criteria identified by the Canadian Council of Forest Ministers (Table 2). Each indicator is associated with a specific goal and objective.

### **6 Forest Stewardship in Canada**

#### **Weyerhaeuser Canada, 2000**

Approximately 25 indicators associated with eight general themes are identified in this stewardship report. Indicators not considered to be measurable were not included in the database. The eight general themes are:

- 1) Products for people

- 2) Water resources and habitat protection
- 3) Soil productivity
- 4) Wildlife habitat
- 5) Visual impact and recreation
- 6) Aboriginal peoples
- 7) Community and stakeholders
- 8) Research and inventory

## **7 Environment, Health and Safety Stewardship Progress Report**

### **Canadian Association of Petroleum Producers, 2000**

Indicators in this document were quantified in terms that reflected industrial performance. Benchmarking results were presented for 24 measures covering operations, air and land quality, and workplace safety. Measures were presented under three themes: 1) Air (sulphur dioxide, flaring, greenhouse gasses, benzene), 2) Land and water (spills and emergency preparedness, well sites), and 3) People and safety. This is the first year that CAPP members have consolidated the data needed to assess their performance, and annual reporting of indicators is planned. Eight indicators considered relevant to the NES strategy were included here.

## **8 Range Health Assessment Program**

### **Public Lands Division, Alberta Agriculture, Food, and Rural Development, 2000**

Nine indicators of range health were identified in the Range Health Assessment Short Form, which is a field guide to guide range health assessments. A comprehensive database containing long-term data range monitoring results on selected sites is maintained by the Land and Forest Service (M. Willoughby, pers. comm.) Indicators were grouped under five elements:

- 1) Integrity and ecological status
- 2) Site stability
- 3) Hydrologic function and nutrient cycling
- 4) Community structure
- 5) Noxious weeds

## **9 West Central Airshed Society Annual Report**

### **West Central Airshed Society, 1999**

This document summarizes ambient air monitoring data collected in west central Alberta. Three of the seven WCAS monitoring sites are located within the NES Strategy area (Hightower Ridge, Steeper, Carrot Creek). In this report, monitoring results for several air quality measurements are compared with Alberta guidelines. Five direct and one indirect indicators of air quality were included in this report.

## **10 Canadian Standards Association Proposal (Draft)**

### **Weyerhaeuser Grande Cache / Grande Prairie, 2001**

Approximately 18 indicators were extracted from a table in this draft proposal. Some indicators were not measurable variables and therefore were not included in the database. The indicators were structured around the six CCFM categories (Table 2). This table is a work in progress and contained many ideas that merit further expansion.

## **11 Park Management Plan**

### **Jasper National Park, 2000**

Approximately 23 indicators of ecological integrity were extracted from this management plan. A target for each indicator is given, along with current levels.

## **12 Sustainable Forest Management Plan**

### **Canadian Forest Products Grande Prairie, 2000**

This report contains approximately 55 potential indicators for sustainable forest management on Canfor's Forest Management Area (FMA) created around the six general criteria developed by the CCFM (see 2 above). Each of the six general criteria is broken down into specific goals which have associated indicators proposed and objectives stated.

## **13 Pacific and Yukon Environmental Indicators**

### **Environment Canada, Pacific and Yukon Region, 2000**

Four indicators were extracted from this website. This website presents a set of environmental indicators for priority issues in which Environment Canada maintains monitoring programs. The indicators are described by answering the four state of the environment questions of what's happening, why is it happening, why is it significant and what is being done (From website [www.ecoinfo.org/env\\_ind/default.htm](http://www.ecoinfo.org/env_ind/default.htm)).

## **14 Alberta Sustainability Trends 2000: The Genuine Progress Indicators Report (1961-1999)**

### **Pembina Institute for Appropriate Development, 2001**

This report outlines 51 indicators for economic, personal-societal and environmental well being. Using the 51 indicators, human, social, natural, produced and financial sustainability are tracked over 40 years (1961-1999). The 51 indicators are combined to give an index of societal well being and sustainability.

## **15 Provincial Sustainability Indicators Initiative (Manitoba)**

### **Government of Manitoba, 2001**

This website outlines the initiatives being taken by the Manitoba Government to determine a suite of sustainability indicators that can help establish provincial targets and policies for sustainable development, and measure performance. Approximately 50 indicators for the environment, economy and human health and social well being are described.

## **16 Canada vs the OECD: An Environmental Comparison**

### **Organization for Economic Cooperation and Development, 2000**

This study compares Canada's environmental record to the other industrialized nations in the Organization for Economic Cooperation and Development (OECD) and tracks Canada's progress on environmental issues over the past two decades. Twenty-five environmental indicators in ten categories – air, water, energy, biodiversity, waste, climate change, ozone depletion, agriculture, transportation and miscellaneous – are examined. The study provides accurate, independent information about Canada's track record in protecting the environment. All of the statistical information comes from data verified and published by the OECD (from <http://www.environmentalindicators.com/execsum.htm>).

## **17 Environmental Trends in British Columbia**

### **BC Ministry of Environment, Lands and Parks, 2000**

This report presents 15 indicators on the state of British Columbia's environment. The status and trends, importance and actions taken are presented for each indicator. Where feasible, the indicator is measured at a sub-regional level where the province is divided into ecological units based on ecoregions or watershed. A summary of sources of problems and threats and a comparison with other jurisdictions is also included. The choice of indicators involved consultation with groups of experts for each issue. Together the 15 indicators represent a balance between provincial, national and global issues.

## **18 Community Indicators Project**

### **Redefining Progress's Community Indicators Project, 2000**

Forty-two indicators were extracted from this web page. Redefining Progress's Community Indicators Project links existing and emerging projects and facilitates the development of community indicators initiatives nationwide. A list of commonly used indicators developed by over 200 community indicators projects around the United States is outlined.

## **19 Sustainable Development in the United States: An Experimental Set of Indicators**

### **US Interagency Working Group on Sustainable Development Indicators, 1998**

Approximately 40 indicators were extracted from this web page. The Sustainable Development Indicators Group (SDI Group) was put together and comprised government, non-government and the private sector. Its purpose was to develop national indicators of progress toward sustainable development. The Group drew on related efforts from around the world, including Canada. Indicators were grouped into Economic, Environmental and Social.

## **20 Sustainability Indicators for the Fraser Basin Workbook**

### **Fraser Basin Council, 2000**

Thirty-eight indicators were extracted from this document. Each indicator is described, including a summary of its importance to sustainability and data availability. The Fraser Basin Council is a not-for-profit, BC society who worked with a group of individuals to develop a draft set of indicators. The draft indicators were selected using the Charter for Sustainability as a framework and corresponded to the 26 goals of the Charter. Four directions of the Charter are:

- 1) Understanding sustainability
- 2) Caring for ecosystems
- 3) Strengthening communities
- 4) Improving decision making

## **21 Obed Mountain Coal**

### **(Personal communication, M. Issard, May 11 2001)**

Obed Mountain Coal monitors environmental indicators in selected creeks in the area of their Mineral Surface Lease. Indicators include the number and size of fish, creek habitat attributes, number of benthic invertebrates by taxa, and water quality, including measures of numerous elements including selenium, oil, and grease.

**22 Detailed Forest Management Plan: Volume I  
Sundance Forest Industries Ltd., 1999**

This plan contains a comprehensive listing of goals for the Sundance FMA area, many of which are consistent with those of the NES Strategy. For each goal, one or more objectives, strategies, and monitoring criteria are also given. Annual monitoring reports, and a 5-year stewardship report, will summarize the results of performance monitoring activities. While indicators are implicit within this DFMP, they are not explicitly listed, and thus no indicators from this plan are included here.

**23 Management Strategy for the Little Smoky River Corridor  
Alberta Newsprint Company, 1996.**

This lists several objectives for the Little Smoky River Corridor, along with key strategies for achieving these objectives. No formal identification of indicators was included.

**24 Sustainable Forest Management: Fish and Wildlife Strategies  
Blue Ridge Lumber Ltd. Detailed Forest Management Plan (1999)**

This report focuses on the ecological aspects of sustainable forest management in the context of Blue Ridge Lumber's Whitecourt Forest area, and was prepared by Westworth Associates Environmental Ltd. A background document intended to support the development of a Detailed Forest Management Plan, it does not contain specific indicators.

**25 Whitehorse Wildland Park Management Plan  
Alberta Environment, Natural Resources Service (Hinton), 2000**

This plan contains detailed management objectives, each accompanied by a description of one or more actions required. No specific indicators are given.

---

**Table 2.** Criteria for sustainable forest management identified by the Canadian Council of Forest Ministers (1995).

---

- Conservation of Biological Diversity
  - Forest Ecosystem Condition and Productivity
  - Conservation of Soil and Water
  - Global Ecological Cycles
  - Multiple Benefits to Society
  - Society's Responsibility for Sustainable Development
-

## **Assessment methodology**

Indicators from each of the sources reviewed were ranked according to their applicability to the planning process developed by the Northern East Slopes Strategy (Fig. 2). It is important to note that this ranking relates specifically to the NES Strategy, and is not meant to be an evaluation of indicators identified by each source organization. Indicators in each source document have been identified in the context of each organization's values, goals, data availability, and intended application.

Indicators were first assigned to one of the 18 goals of the NES Strategy (Appendix 1). Then, five considerations were applied to each indicator:

### Relevance to the NES Strategy Goal

- 1 = Moderate to low relevance to the corresponding regional NES Strategy goal.
- 2 = High relevance to the corresponding regional NES Strategy goal.

### Regional monitoring potential

- 1 = Moderate to low potential, generally because information required to quantify the indicator is not currently available over a significant part of the NES Strategy area.
- 2 = High potential, generally because much of the necessary information is currently available. Note that the effort required to assemble available information may vary considerably among indicators.

### Availability of baseline information to support regional forecasting of future indicator levels

- 0 = Not applicable. Indicator is an "Activity" indicator and is not appropriate for use in scenario forecasting.
- 1 = Moderate to low availability over a significant part of the NES Strategy area.
- 2 = High availability over a significant part of the NES Strategy area.

### Level of confidence in predictions of future forecasted indicator levels

- 0 = Not applicable. Indicator is an "Activity" indicator and is not appropriate for use in scenario forecasting.
- 1 = Moderate to low confidence, generally because of insufficient understanding of the relationships between land use and changes in indicator levels.
- 2 = High confidence, generally because sufficient understanding exists to relate land use to changes in indicator levels.

## Simplicity

1 = Not simple; persons without specialized experience or training may have difficulty understanding or interpreting the indicator

2 = Simple; specialized experience or training is not necessary to understand or interpret the indicator.

For each indicator, the total of all values (0, 1, or 2) assigned for the five considerations were summed, giving an overall value of 10. This overall value is interpreted as follows:

10 - An excellent indicator, highly relevant to at least one goal of the NES Strategy, with high potential for monitoring and forecasting, and easily understood by persons without specialized experience or training.

9 - A very good indicator, worthy of strong consideration for the NES Strategy, provided the single weakness is recognized or accommodated.

8 - A good indicator, worthy of consideration for the NES Strategy, provided its weaknesses are recognized or accommodated.

7 - A fair indicator, worth considering for the NES Strategy, but significant weaknesses may compromise its utility.

0 - 6 - Unlikely to be a useful indicator for the NES Strategy unless the identified weaknesses are recognized or accommodated.

# Summary of indicators applicable to the goals of the NES Strategy

## History and historical resources: Table 3

1. *To ensure that historical resources are identified and respected in the decision-making process*
  - ❑ Only four indicators applicable to this goal were identified, all of which described some management activity related to historical or archaeological resources. Two indicators were referenced in sources within the NES Strategy area.
  - ❑ None of the indicators ranked highly, according to the assessment methodology applied, and it is recommended that progress towards this goal be assessed in a qualitative fashion only.
2. *To ensure that our history is understood and respected in the decision making process*
  - ❑ No indicators applicable to this goal were identified, and it is recommended that progress towards this goal be assessed in a qualitative fashion only.

## Wise resource use: Table 4

1. *To optimize all value added opportunities from the resource*
  - ❑ No indicators applicable to this goal were identified.
  - ❑ It is recommended that a new indicator relating to the regional economic contribution of value added industries be developed using existing information available through Statistics Canada or Alberta government sources.
2. *To minimize waste*
  - ❑ A total of 34 indicators applicable to this goal were identified, all of which described the levels of some condition related to solid waste. Only 4 indicators were referenced in sources within the NES Strategy area.
  - ❑ Several excellent indicators were identified, which related primarily to the amount of solid waste generated.
  - ❑ It is recommended that the amount of solid waste generated within the NES Strategy is an appropriate indicator for this goal. Amounts could be quantified using existing information available from municipal and provincial government sources.
3. *To encourage sustainable use*
  - ❑ A total of 98 indicators applicable to this goal were identified, including activities and conditions related to sustainable use. Almost half (46) of the indicators were referenced in sources within the NES Strategy area.
  - ❑ Many excellent indicators were identified, which related to the volume or area of timber removed (14 indicators), and the availability of mineral resources (1 indicator). Many indicators were also considered very good, including those relating to grazing intensity, landbase composition, and road density.

- ❑ It is recommended that each of the above five indicators be considered to assess progress towards this goal, using information available from provincial government sources and Forest Management Agreement holders.

4. *To integrate activities among all stakeholders and governments*

- ❑ A total of 14 indicators applicable to this goal were identified, all but three of which referred to activities related to integration among stakeholders and governments. Seven indicators were referenced in sources within the NES Strategy area.
- ❑ While no excellent or very good indicators were identified, three state indicators rated good to fair are worthy of consideration. These related to the amount and area of timber or land lost to other industrial activities.
- ❑ It is recommended that progress towards this goal be assessed in a qualitative fashion, but some consideration should be given to measuring the extent (area, resource value) to which one stakeholder may compromise another. Information needed to quantify this indicator may be available from provincial government sources and Forest Management Agreement holders.

**Wilderness lands: Table 5**

1. *To integrate management of designated protected areas within the regional landscape.*

- ❑ A total of 12 indicators applicable to this goal were identified, all of which referred to the area of land designated as protected. Only one indicator was referenced in a source within the NES Strategy area.
- ❑ All indicators were rated excellent, due to their strong relevance to this goal, and the relative ease with which future areas can be monitored and forecast.
- ❑ It is recommended that progress towards this goal be assessed using an indicator of area designated as protected within the NES Strategy area, using information available from provincial government sources and Forest Management Agreement holders.

2. *To ensure wilderness lands are maintained.*

- ❑ One indicator applicable to this goal was identified, which referred to the amount of land that was undisturbed by human activity.
- ❑ This indicator was rated excellent, due to its strong relevance to this goal, and the relative ease with which future areas can be monitored and forecast.
- ❑ It is recommended that progress towards this goal be assessed using an indicator of area undisturbed within the NES Strategy area. Information is available from provincial government sources and Forest Management Agreement holders, although it will be necessary to define “undisturbed” for the purpose of calculating total area.

## **Public enjoyment of the great outdoors: Table 6**

1. *To provide opportunities for responsible enjoyment and appreciation of our natural environment.*
  - A total of 13 indicators applicable to this goal were identified, most of which referred to the availability or use of areas for recreational purposes.
  - Four indicators were rated excellent; these were related to the availability of recreational opportunities. Seven additional indicators were rated very good; these were somewhat more difficult to monitor and forecast because they required estimates of recreational use in addition to availability.
  - It is recommended that progress towards this goal be assessed using a single indicator that quantifies the range of recreational opportunities in the NES Strategy area. Information is available from provincial government sources and Forest Management Agreement holders, although it will be necessary to define recreational opportunities for the purpose of calculating total area and availability.

## **Healthy and sustainable communities: Table 7**

1. *To understand, respect and protect a community's culture and sense of being.*
  - A total of 55 indicators applicable to this goal were identified, most of which referred to some condition related to community health or well-being. Only three indicators were referenced in a source within the NES Strategy area.
  - While no indicators were rated excellent, 12 were considered very good. These were related to several community conditions including crime, employment, population, and injury.
  - It is recommended that progress towards this goal be assessed using the above four indicators. Information is available from provincial government and municipal sources, but the effort required to assemble existing information may vary considerably among indicators.
2. *To encourage sustainable resource use and economic diversity through regional economic activities and cooperation.*
  - A total of nine indicators applicable to this goal were identified, three of which were referenced in a source within the NES Strategy area.
  - None of the indicators were considered excellent or very good, but seven were considered good. These included six measures of employment and economic diversity, and one related to regional cooperation.
  - It is recommended that progress towards this goal be assessed in a qualitative fashion only, unless sufficiently reliable information on economic diversity is available from existing sources.

## **Integrity and fairness in decision making: Table 8**

1. *To assure that decision making process is timely, transparent, predictable, consistent, fair and equitable.*
  - ❑ A total of 34 indicators applicable to this goal were identified, of which over half (18) were referenced in a source within the NES Strategy area. They included indicators of activities and measures of condition related to decision making.
  - ❑ None of the indicators were considered excellent or very good, and only three were considered good. These were all measures of satisfaction with the decision-making process.
  - ❑ It is recommended that progress towards this goal be assessed in a qualitative fashion only, unless coordinated mechanisms such as opinion or attitude surveys become available to quantify levels of satisfaction.
2. *To ensure decisions are made and revisited in light of current science, technology and societal values.*
  - ❑ A total of 44 indicators applicable to this goal were identified, of which 17 were referenced in a source within the NES Strategy area.
  - ❑ None of the indicators were considered excellent or very good, and only three were considered good. All were measures of education, and their relevance to this goal was relatively low.
  - ❑ It is recommended that progress towards this goal be assessed in a qualitative fashion only.

## **Healthy and sustainable economy: Table 9**

1. *To optimize economic benefits and economic stability through diversification.*
  - ❑ A total of 44 indicators applicable to this goal were identified, of which only 3 were referenced in a source within the NES Strategy area.
  - ❑ None of the indicators were considered excellent, but 14 were very good. These related to several aspects of the economy and economic diversity.
  - ❑ It is recommended that progress towards this goal be assessed using a simple index of economic diversity generated from information available from provincial and federal (e.g., Statistics Canada) government sources.
2. *To encourage conditions that maintain opportunities for resource development.*
  - ❑ Only two indicators applicable to this goal were identified, neither of which were referenced in a source within the NES Strategy area.
  - ❑ Both indicators were excellent or very good, one being a measure of petroleum reserves, the other a measure of the number of industries driving local economies.
  - ❑ It is recommended that progress towards this goal be assessed using both of the above indicators, using information available from provincial and federal government sources.

3. *To maintain our competitiveness (in the global market).*
  - ❑ Only three indicators applicable to this goal were identified, two of which were referenced in a source within the NES Strategy area.
  - ❑ None of the three indicators were considered excellent or very good.
  - ❑ It is recommended that progress towards this goal be assessed in a qualitative fashion only.

## **Healthy and sustainable environment: Table 10**

1. *Conservation of biological diversity at the ecosystem, species and genetic levels within the region.*
  - ❑ A total of 139 indicators applicable to this goal were identified, of which just over half (71) were referenced in a source within the NES Strategy area. They included indicators of activities related to biodiversity conservation, and conditions describing biodiversity at one or more spatial scales and levels of biological organization.
  - ❑ None of the indicators were considered excellent, primarily due to the difficulty of reliably monitoring and forecasting future levels of most ecological attributes. Twelve indicators were considered very good, most of which described the age-class distribution of forests.
  - ❑ It is recommended that age-class distribution of forests be used as an indicator of progress towards this goal at the regional level, with additional consideration given to other measures of landscape diversity and habitat diversity measurable at finer spatial scales. Information describing forest age class distribution is readily available from provincial government sources and Forest Management Agreement holders.
2. *To ensure that the quality of air, water, and soil are at healthy levels.*
  - ❑ A total of 98 indicators applicable to this goal were identified, of which almost half (43) were referenced in a source within the NES Strategy area. They included indicators of activities and measures of condition related to the quality of air, water, and soil.
  - ❑ None of the indicators were considered excellent or very good, primarily due to the difficulty of reliably monitoring and forecasting the future levels of air, water and soil quality. A total of 16 indicators considered “good” were direct or indirect measures of air and water quality.
  - ❑ It is recommended that progress towards this goal be assessed in a qualitative fashion only, unless an improved monitoring capability becomes available to assess air and water quality.

**Table 3.** List of indicators that could support the assessment of progress towards NES Strategy goals related to History and historical resources. In the three columns to the left of each indicator, “+” means the indicator has been identified by a source within the NES Strategy area, numbers refer to sources listed in Table 1, “A” = Activity indicator, “S” = State indicator. See text for explanation of ranking.

| Goal  | Indicator  | Overall Rank | Relevance to NES Strategy goal | Regional monitoring potential | Regional forecasting - baseline | Regional forecasting - confidence | Simplicity |
|---|--|--------------|--------------------------------|-------------------------------|---------------------------------|-----------------------------------|------------|
| <b>To ensure that historical resources are identified and respected in the decision-making process</b>                |  |              |                                |                               |                                 |                                   |            |
| +   | 5 A compliance with Historical Resources Act                             | 5            | 1                              | 2                             | 0                               | 0                                 | 2          |
| +   | 5 A validation of heritage potential values                              | 5            | 1                              | 2                             | 0                               | 0                                 | 2          |
|   | 6 A number of field assessments in which archeological resources at risk | 4            | 1                              | 1                             | 0                               | 0                                 | 2          |
|   | 6 A number of known archeological sites accommodated in plans            | 4            | 1                              | 1                             | 0                               | 0                                 | 2          |
| <b>To ensure that our history is understood and respected in the decision making process</b><br>(no indicators found) |  |              |                                |                               |                                 |                                   |            |

**Table 4.** List of indicators that could support the assessment of progress towards NES Strategy goals related to Wise resource use. In the three columns to the left of each indicator, “+” means the indicator has been identified by a source within the NES Strategy area, numbers refer to sources listed in Table 1, “A” = Activity indicator, “S” = State indicator. See text for explanation of ranking.

| Goal   | Indicator   | Overall Rank | Relevance to NES Strategy goal | Regional monitoring potential | Regional forecasting - baseline | Regional forecasting - confidence | Simplicity |
|--|---|--------------|--------------------------------|-------------------------------|---------------------------------|-----------------------------------|------------|
| <b>To optimize all value added opportunities from the resource</b> |   |              |                                |                               |                                 |                                   |            |
| (no indicators found)  |   |              |                                |                               |                                 |                                   |            |

**Table 8.** List of indicators that could support the assessment of progress towards NES Strategy goals related to Integrity and fairness in decision making. In the three columns to the left of each indicator, “+” means the indicator has been identified by a source within the NES Strategy area, numbers refer to sources listed in Table 1, “A” = Activity indicator, “S” = State indicator. See text for explanation of ranking.

| Goal  | Indicator  | Overall Rank | Relevance to NES Strategy goal | Regional monitoring potential | Regional forecasting - baseline | Regional forecasting - confidence | Simplicity |
|---|--|--------------|--------------------------------|-------------------------------|---------------------------------|-----------------------------------|------------|
| <b>To assure that decision making process is timely, transparent, predictable, consistent, fair and equitable</b> |  |              |                                |                               |                                 |                                   |            |
| +   | 3 S degree of satisfaction with SFM as applied to FMA  | 8            | 2                              | 2                             | 1                               | 1                                 | 2          |

**Table 9.** List of indicators that could support the assessment of progress towards NES Strategy goals related to Healthy and sustainable economy. In the three columns to the left of each indicator, “+” means the indicator has been identified by a source within the NES Strategy area, numbers refer to sources listed in Table 1, “A” = Activity indicator, “S” = State indicator. See text for explanation of ranking.

| Goal  | Indicator   | Overall Rank | Relevance to NES Strategy goal | Regional monitoring potential | Regional forecasting - baseline | Regional forecasting - confidence | Simplicity |

**Table 10.** List of indicators that could support the assessment of progress towards NES Strategy goals related to Healthy and sustainable environment. In the three columns to the left of each indicator, “+” means the indicator has been identified by a source within the NES Strategy area, numbers refer to sources listed in Table 1, “A” = Activity indicator, “S” = State indicator. See text for explanation of ranking.

## Glossary

- Value:** A principle, standard or quality considered worthwhile or desirable (Canadian Standards Association 1996).
- Goal:** A broad, general statement that describes a desired state or condition related to one or more values (Canadian Standards Association 1996).
- Indicator:** A measurable variable used to report progress toward the achievement of a goal (Canadian Standards Association 1996).

---

**Appendix 1. Goals of the Northern East Slopes Strategy.**

---

**Goal<sup>1</sup>****History and historical resources**

- 1.1 To ensure that historical resources are identified and respected in the decision-making process.
- 1.2 To ensure that our history is understood and respected in the decision making process.

**Wise resource use**

- 2.1 To optimize all value added opportunities from the resource.
- 2.2 To minimize waste.
- 2.3 To encourage sustainable use.
- 2.4 To integrate activities among all stakeholders and governments.

**Wilderness lands**

- 3.1 To integrate management of designated protected areas within the regional landscape.
- 3.2 To ensure wilderness lands are maintained.

**Public enjoyment of the great outdoors**

- 4.1 To provide opportunities for responsible enjoyment and appreciation of our natural environment.

**Healthy and sustainable communities**

- 5.1 To understand, respect and protect a community's culture and sense of being.
- 5.2 To encourage sustainable resource use and economic diversity through regional economic activities and cooperation.

**Integrity and fairness in decision making**

- 6.1 To assure that decision making process is timely, transparent, predictable, consistent, fair and equitable.
- 6.2 To ensure decisions are made and revisited in light of current science, technology and societal values.

**Healthy and sustainable economy**

- 7.1 To optimize economic benefits and economic stability through diversification.
- 7.2 To encourage conditions that maintain opportunities for resource development.
- 7.3 To maintain our competitiveness (in the global market).

**Healthy and sustainable environment**

- 8.1 Conservation of biological diversity at the ecosystem, species and genetic levels within the region.
- 8.2 To ensure that the quality of air, water, and soil are at healthy levels.
