

Notes on Employment

The unemployment rate measures the proportion of people in the labour force who were actively searching for a job but did not have work in the week prior to the census. This includes people who were temporarily laid off or who had arrangements to start a new job within four weeks. Those who did not actively seek employment, such as discouraged workers or domestic workers, are considered to be not in the labour force.

The participation rate measures the number of people in the labour force as a proportion of the total population. The labour force is comprised of both employed and unemployed persons.
